

*I am very impressed with the efficacy, speed, and safety, of the SquareEpil laser on all skin types, for hair removal, photocoagulation of vascular lesions and skin tightening.*

*The proprietary “blending” of 755 nm Alexandrite and 1064 nm Nd:YAG, together with large square spots (up to 27x27mm), built-in smoke evacuator and easy maintenance (lamps can be easily replaced without any further help from laser technician) make this laser system really “unique” on the market. SquareEpil will be the new star in hair removal as it addresses dark skin types, as well as fine hairs, with unmatched results. The speed of treatment is unbelievably fast: it is possible to perform a full-body hair removal even in 30 minutes in selected cases! My patients are getting impressive long-term results in only four sessions. Since there are no consumables involved, return of investment is rapidly achieved.*
